

INSTAGRAM BENCHMARK & PROPOSAL

Bangkok Luxury Hotels — Instagram Benchmark & Content Support Proposal

How five of Bangkok's leading luxury hotels present themselves on Instagram, where the gaps are, and how analysis, video and content support can address them — from proposal to analysis to operation.

Prepared by **HATTORI ICHIDAI** — Instagram Analytics & Digital Marketing Strategist
Portfolio: https://2026webai-lab.github.io/newportfolio/hotel.html
November 2026

Independent research and sales proposal. Not commissioned by or affiliated with the hotels named. Cover photo: Wat Arun (Temple of Dawn), Bangkok — photo by Fernando Garcia (FerTravelPhoto), CC BY 3.0, via Wikimedia Commons. All figures are drawn from public data, compiled November 2026; sources and caveats are noted throughout.

SECTION 1

The Benchmark at a Glance

Five Bangkok luxury hotels were reviewed using publicly available data: official profiles and third-party Instagram trackers. Figures marked “n/a” could not be verified from public sources — an honest blank, not an estimate. Tracker values were crawled between November 2025 and November 2026, so treat them as orders of magnitude.

The five hotels in this benchmark

Hotel	Instagram	Followers	Total posts	Reading of the data
Sivatel Bangkok Ploenchit · independent, all-suite (75 suites)	handle not officially confirmed	n/a	n/a	The account could not be located reliably through web search, which points to a discoverability gap. Strong raw material: sustainability programme (70% organic sourcing, zero food waste to landfill in 2023, 50+ local farm partners), infinity pool, The Eight Spa.
The Sukhothai Bangkok Sathorn · independent 5-star	@thesukhothaibangkok	n/a	n/a	No reliable public follower figure exists. Content themes from official materials: Celadon Thai restaurant, spa, gardens and pool, weddings. As an independent, it has no global chain cross-promotion behind it.
Mandarin Oriental, Bangkok Riverside · est. 1876	@mo_bangkok	≈ 89K–101K	3,134	The largest audience of the five, with a tracker-reported engagement rate of only 0.47% (StarNgage) — which suggests reach is not turning into response. Heritage, river and dining content leads.
Siam Kempinski Hotel Bangkok Siam · palace gardens	@siamkempinski	30K+	n/a	30,000 followers announced by the hotel itself in May 2026 — roughly one third of Mandarin Oriental’s audience. Feed leans promotional (afternoon-tea and dining offers, events).
Rosewood Bangkok Ploenchit · opened 2019	@rosewoodbangkok	n/a	n/a	Property-level follower figures are not publicly visible (the global brand account’s 328.5K is not a substitute). Art-led positioning; at opening, its social launch was produced by an external agency.

Competitor reference points

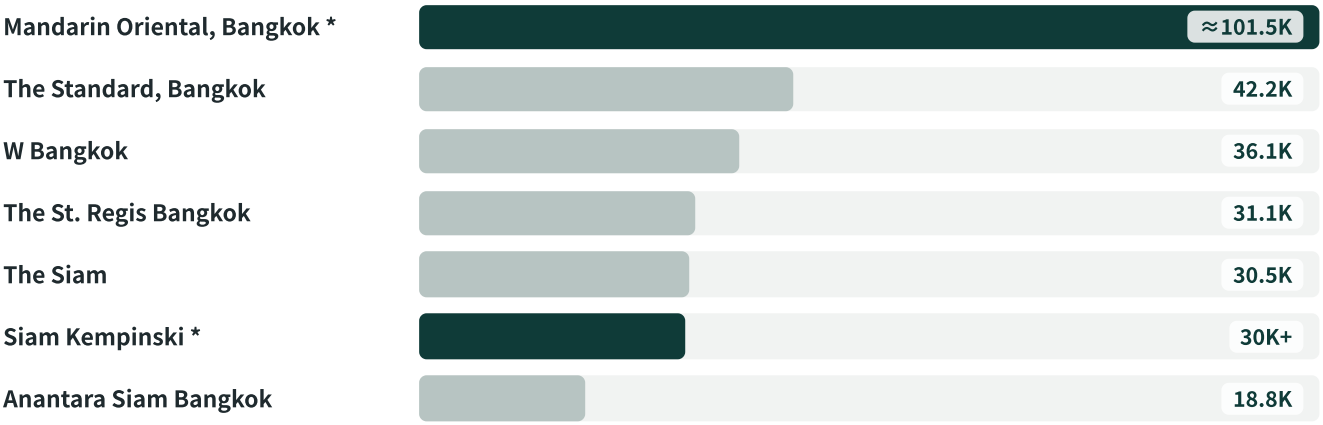

Hotel	Instagram	Followers	Total posts	Engagement
The Standard, Bangkok Mahanakhon	@thestandardbangkok	42,204	678	—
W Bangkok	@wbangkok	36,099	3,056	—
The St. Regis Bangkok	@stregisbangkok	31,070	2,559	0.3%
The Siam	@thesiamhotel	30.5K	n/a	1.32%
Anantara Siam Bangkok	@anantarasiambangkok	18,842	1,941	—

Sources: instastatistics, StarNgage, Socialveins and Keepface tracker data (crawled Nov 2025 – Nov 2026); Siam Kempinski’s figure is the hotel’s own announcement (May 2026). Four Seasons Bangkok is excluded: its only public figures are multi-account cumulative totals (43K+ across 8 handles, 2019–2024), not comparable with single-account values. Engagement rates come from different trackers and methods and are not strictly comparable. Weekly posting frequency and reel ratios could not be derived reliably from public data; total post counts proxy activity volume.

SECTION 2

Followers: Where Each Hotel Stands

The chart includes only accounts with a verifiable public follower figure. Two of the five benchmark hotels (Sivatel, The Sukhothai) and Rosewood Bangkok's property account do not publish a figure that can be confirmed from public data — they are absent from the chart, which is itself a finding.

Dark bars marked * are hotels in this benchmark; pale bars are competitor reference points. Mandarin Oriental is plotted at 101,509 (instastatistics, crawled April 2026); StarNgage lists 89.4K — read it as a range of ≈89K–101K. Siam Kempinski: the hotel's own "30,000 followers" announcement, May 2026. Public data, compiled November 2026.

> **What the chart says:** one riverside icon leads by a wide margin; behind it, a tight band of hotels sits at 30–42K followers regardless of brand size. Position within that band may depend more on content cadence and format than on budget — areas where dedicated content support can help. Note also the engagement contrast in the tracker data: The Siam shows 1.32% on a 30.5K audience, while The St. Regis shows 0.3% and Mandarin Oriental 0.47% — smaller accounts appear to earn stronger response than larger broadcast-style ones, though figures from different trackers should be read with care.

SECTION 3

Observed Gaps — and the Opportunities in Them

1 Independent hotels are hard to find online

Sivatel's Instagram could not be pinned down through ordinary web search, and no public tracker carries reliable figures for it or for The Sukhothai. For hotels without a global chain's cross-promotion, discoverability is the first bottleneck — before content quality even matters. The fix is unglamorous and effective: consistent posting, correct profile hygiene, and content built around what each property uniquely has (in Sivatel's case, a sustainability story most chains cannot match).

2 Reach without response

Mandarin Oriental reaches roughly 90–100K followers but records a tracker-reported engagement rate of 0.47%. The St. Regis shows the same pattern (0.3%). Meanwhile The Siam, at 30.5K followers, shows 1.32%. A likely factor is format and conversation rather than photography: question-led captions, replies, stories and short video that invite a response instead of announcing an offer.

3 Promotion-led feeds

Siam Kempinski's feed, as reflected in its own press output, centres on seasonal promotions — afternoon-tea collaborations, dining offers, events. Promotions convert existing demand; they do little to create it. Story-led content (the palace gardens, the people, the neighbourhood) gives a traveller a reason to choose one luxury hotel over an identical-looking rival.

4 Video demand is proven — official video supply is unclear

Visitor-shot reels of Bangkok's riverside and spa scenes have reached several hundred thousand views (one example: 454.6K). The audience for short video about these properties demonstrably exists. How much of that demand the official accounts themselves capture could not be verified from public data — reel ratios are not visible from outside. That makes a short, measured video push an easy first experiment for any of the five hotels.

5 No visible Japanese-language content

Across all five hotels, Japanese-language posting could not be confirmed in public data. Japanese travellers are an established source of visitors to Bangkok (this report does not size the segment), yet they appear to be addressed mainly in English. A native Japanese creator producing Japanese captions, stories and short videos alongside the English feed would offer a differentiator that none of the five visibly shows in public data.

> **A note on method:** where this section goes beyond the numbers, it says so. Items 1–3 and 5 are grounded in the public data above; item 4 is an inference from visitor content, flagged as such. A full audit — posting cadence, reel ratio, audience geography — requires account insights, which only the hotel can share. Producing that audit is the first deliverable proposed on the next page.

SECTION 4

What I Can Do for Your Hotel

I am a Japanese web marketer and digital creator with six years of fully remote work for businesses — SEO, GA4 analytics, advertising, social media operations and web production. Support can run end to end: **propose → analyse → operate**.

1 Instagram account analysis

A structured audit of your account — public data plus, with your permission, account insights: posting cadence and timing, format mix, engagement quality, profile and booking-path hygiene — delivered as a written report with prioritised actions, and a follow-up review.

2 Short-form video production

Reels and TikTok-ready vertical video of the property — rooms, pool, spa, dining, neighbourhood — planned, shot and edited, on site where the project allows. Vertical-first, captioned, and scheduled at the hours your audience is actually awake.

3 Competitor SNS research

A benchmark of your direct competitors' social presence, in the format of this document, updated with your account's real numbers — so decisions rest on data, not impressions.

4 Japanese content for Japanese travellers

Native Japanese captions, stories, short videos and web copy aimed at Japanese guests — a segment none of the five benchmarked hotels visibly addresses in public data. Includes guidance on what Japanese travellers look for (and what puts them off) when choosing a Bangkok hotel.

5 Tourism content planning

A practical content calendar — events, seasons, offers and stories mapped to formats and posting times — that your team can keep running after the engagement ends.

> **Plus — 360° drone content.** I work with a drone equipped with a 360° camera. Where local rules and hotel policy permit, it produces immersive aerial and panoramic material — riverside frontage, rooftop and pool decks, gardens — that ordinary cameras cannot capture, and that suits short-form feeds.

How an engagement works

- Scope, fees and schedule are discussed after a first conversation.
- Agreed in advance: deliverables, posting schedule, usage rights for produced content, and the review and approval flow with your marketing team.
- Nothing goes live without your team's approval.

SECTION 5

Case Study: A Public-Data Instagram Analysis

THE TSUBAKIMORI HOTEL (@the_tsubakimori_hotel) — a boutique hotel in Chiba, Japan, opened May 2026. In October 2026 I analysed its Instagram presence using public data only: the profile and every retrievable post (26 of 56, 6 May – 25 October 2026), with a detailed last-90-days cut. The point of the exercise is the method: everything below is verifiable by anyone, and owner-only metrics are labelled as such rather than guessed. This is an independent concept project, not client work.

2,234	25.7	1	14 / 26
followers at ~6 months after opening	average likes per post, last 90 days (median 24)	total comments across 13 posts in 90 days	posts timestamped between 1 a.m. and 5 a.m.

What the data showed

- **Event tie-ins stand out.** The best-performing post (154 likes — over 4× the 26-post average of 35.2) was a limited plan tied to a local night-art festival. Opening-period and event-linked posts took the top four spots; the last-90-day average was 25.7 likes.
- **Conversation is almost absent.** One comment in total across the last 90 days. Captions announce; they rarely ask. No question formats or story polls are visible in the public data.
- **Many posts carry early-morning timestamps.** 14 of 26 analysed posts show times between 1 a.m. and 5 a.m., 8 of them in the 3 a.m. hour. This may simply reflect scheduler settings; its effect on reach is unverified and is a first test to run with Insights.
- **Format mix is balanced.** Carousels 11, reels 11, photos 4 — the production effort exists. Likes ÷ followers (≈1.2% over the last 90 days) is a reference ratio only, not an engagement rate, because reach is unknown.

Recommendations delivered

- Test posting at audience hours: 7–9 a.m., midday, 8–10 p.m.
- Question-led captions and story polls or question stickers to restart conversation.
- Make event tie-ins a recurring calendar item with the city's event schedule, not one-offs.
- Share account insights so reel performance (views, saves, shares — invisible from outside) can be measured and the plan adjusted on evidence.

Full analysis (Japanese and English editions, 24 pages each) is available on the portfolio site. Method note: reach, impressions, saves and audience demographics are owner-only Instagram insights and were not available; the analysis states this openly rather than estimating them — the same standard applied to the benchmark in Section 1. Not commissioned by or affiliated with the hotel.

SECTION 6

About & Contact

HATTORI ICHIDAI

Japanese web marketer and digital creator, based in Chiba, Japan. Six years of fully remote work: SEO, GA4 analytics, advertising operations, social media management, website and e-commerce production (PHP/MySQL), and AI-assisted workflow efficiency. Creator name: KAZUYA.

I also run a travel Instagram account of about 10,000 followers covering travel and money in Thailand.

Portfolio (hotel & tourism work): https://2026webai-lab.github.io/newportfolio/hotel.html

How a collaboration typically starts

- A short call or email exchange to agree scope, deliverables and schedule.
- Week 1: account audit (Section 5 method) and a content plan for approval.
- During the project: production and scheduled posting, with your team approving before anything goes live.
- Final week: results review, competitor benchmark update, and a handover calendar your team can continue.

Data sources & methodology: hotel figures are from official hotel materials, hotel announcements and third-party Instagram trackers (instastatistics, StarNgage, Socialveins, Keepface), crawled at various dates between November 2025 and November 2026 and compiled in November 2026; figures that could not be verified publicly are shown as “n/a” rather than estimated. Case-study data: Instagram public profile and post data retrieved 30 October 2026. Cover photo: Fernando Garcia (FerTravelPhoto), CC BY 3.0, via Wikimedia Commons. Published as an independent portfolio sample; not commissioned by, endorsed by or affiliated with the hotels named. Hotel names and trademarks belong to their owners. Figures are approximate public data — please cite them with this context.
